TELEPROMPTER MIRRORS.COM

quick prompt

The QuickPrompt™ is an easy solution to your teleprompter project at an incredible price.

The QuickPrompt™ is very light weight and portable, fitting into most laptop cases.

We use only the finest optical-grade mirrors, using nanotechnology to allow maximum amount of light to pass through.

TELEPROMPTER MIRRORS.COM

quick prompt assembly

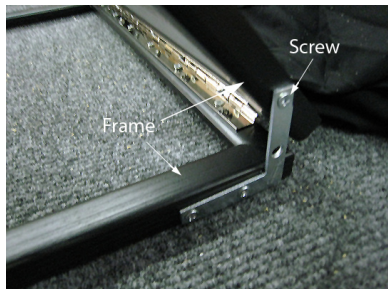

Supplies:

1. Screws (2)
2. Set of velcro (2)
3. LCD*
4. Table*

* Items not included in package

Step 1:

Open frame until the bottom bracket holes are aligned with the pre-drilled holes on the frame. Locate the 2 screws that were shipped with your unit and secure the bracket to the frame. See figure below.

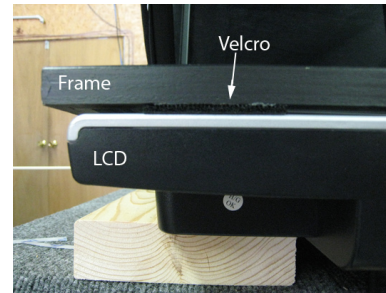

Step 2:

With your monitor laying flat, (screen side up) use the supplied velcro and peel backing off of one side and place the velcro on your monitor. Be careful not to place over any buttons on your monitor.

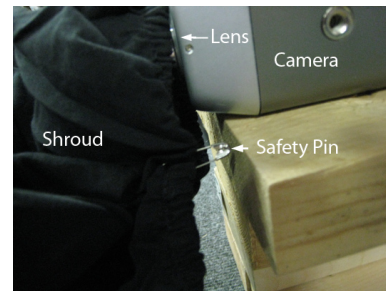

You can now peel the backing off of the other side of the velcro and lay your frame over your monitor.

Do not apply velcro to the visible portion of your screen.

Step 3:

Remove one of the safety pins from the opening in the shroud. Place your camera into the opening and replace the safety pin ensuring that the shroud is completely closed off allowing no light to enter the teleprompter. You can now pull any loose shroud material back and secure it to your camera with some tape.

You are now ready to attach your computer, install **MirrorScript Pro™**, and start your video project.

quick guide how to use

Ensure that you set your teleprompter at the correct height. You want to be looking straight into the camera while you are reading your text.

If you are having trouble with installing your software you can visit

www.freetelepromptersoftware.com

You want to ensure you have your text flipped horizontally so you are able to read it while in front of the teleprompter.
